Resysta glazes, oils and varnishes

We offer an almost infinite range of colors for coating with Resysta glazes and Resysta stains. Up to 12 Standard Shades, including the natural shade C23. The colors and glazes (stains) offered by Resysta are based on a water-diluted paint system and colored transparently with high-quality pigments. In the case of transparently glazed surfaces, the overall color is the result of the interplay of the background color and the transparent color of the glaze. The overall color is determined by the amount of pigments applied and the preparation of the material to be coated.

Resysta colored varnish RCL and primer RBP

Transparent colored glazes for decorative indoor and outdoor color design, e.g. facades, fences, roof soffits. Water-based, fast drying and easy to apply.

Resysta stains FVG and 2-component varnish RFS

Transparent colored stains combined with an additional 2-component clear coat providing for mechanically and chemically highly resistant indoor and outdoor surfaces such as terrace flooring and utilitarian furniture.

All systems can be processed on industrial equipment

If you have any questions about industrial processing, we are at your disposal.
